GENERAL NOTES

ROADWAY: 36'-1" Face of rail to edge of sidewalk.

CAPACITY: Dead Load-Includes 15 lbs. per sq. ft. for future wearing surface. Live Loads-HS20-44 loading and B.P.R. modified for military vehicles.

SPECIFICATIONS: GENERAL-Virginia Department of Highway Road and Bridge Specifications, 1970.
DESIGN-A.A.S.H.O. Standard Specifications for Highwau Bridges, 1969 and 1970-72 Interim Specifications, modified by Special Design Provisions.
WELDING: 1972 Structural Welding Code of the American Welding Society.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: CITY OF RICHMOND

TEMPERATURE: The normal temperature referred to on the plan is 60° F. The temperature range for movement is 0° F. to 120° F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Found. mat'l. shall be kept dry & special attn. is called to Sec. 401.05 of the Gen. Specs. & to the Contract Special Prov. concerning preparation of found. for ftgs.

CONCRETE NOTES: Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a ¾" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete, and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete. (When gradient is over 2%).

Finishing concrete surfaces: See the Standard Architectural Detail Sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall be intermediate grade. All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted.

All Field connections shall be made with high strength bolts. High strength bolts shall be ⅞" diameter unless otherwise noted and shall conform to A.S.T.M. Specification A-325.

BENCH MARK: C-11. Copper Weld Rod, South side of Maplewood Ave. at Belmont Ave. Elev. 215.37.

Indicates 2½" ϕ cased hole boring.

FOUNDATIONS: Footings shall rest on firm material. Foundation material shall be kept dry and special attention is called to section 401.05 of the General Specifications, and to the Contract Special Provisions, concerning preparation of foundations for footings.

CONCRETE NOTES:
Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a ¾" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low slump concrete and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete. (When gradient is over 2%)
Finishing concrete surfaces: See the Standard Architectural Detail Sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall conform to ASTM A615 Grade 40. All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted.
All field connections shall be made with high strength bolts. High strength bolts shall be ⅞" diameter unless otherwise noted and shall conform to A.S.T.M. Specification A-325.

BENCH MARK: C-32. Monument located in walk S.W. Corner Idlewood and S. Randolph Sts. Elev. 192.25.

GENERAL NOTES

ROADWAY: One 48'-0" clear roadway. Two 5'-0" sidewalks.

CAPACITY: Dead Load - Includes 15 lbs. per sq. foot for future wearing surface. Live Load - H S20-44 and B.P.R. modified for military vehicles.

SPECIFICATIONS: GENERAL - Virginia Department of Highways Road and Bridge Specifications, 1970. DESIGN - A.A.S.H.O. Standard Specifications for Highway Bridges, 1973 WELDING - 1972 Structural Welding Code of the American Welding Society.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: U.S.C. and G.S. (Sea level, 1929 General Adjustment).

TEMPERATURE: The normal temperature referred to on the plans is 60° F. The temperature range for movement is 0° F to 120°F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Foundation material shall be kept dry and special attention is called to section 401.05 of the General Specifications, and to the Contract Special Provisions, concerning preparation of foundations for footings.

CONCRETE NOTES:

Concrete in the superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a ¾" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low slump concrete and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete (when gradient is over 2%). Finishing concrete surfaces. See the Standard Architectural Detail Sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall conform to ASTM Specification A615 Grade 40. All reinforcing bar dimensions on the detailed plans are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES:

Structural Steel shall conform to ASTM Specification A36 except as noted. All field connections shall be made with high strength bolts. High strength bolts shall be ⅞" diameter unless otherwise noted and shall conform to ASTM Specification A325.

All shop welded web splices, flange splices and web to flange welds shall be made by the submerged arc process.

BENCH MARK: C-34 Monument in walk on the East side of Harrison Street between Parkwood Avenue and Cary Street. Elev. 179.381.

NOTES: Top of Pavement Elevations at ends of deck along P.G.L. are given on the plan. Remaining pavement elevations are given on Sheet 11. The cost of furnishing and installing 2"Ø and 3"Ø galvanized steel conduit shall be included in the bid price for the item "Metal Conduit".

Indicates 2½"Ø cased hole boring.

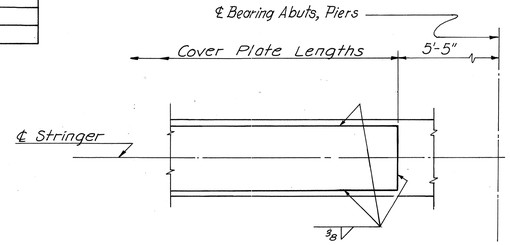
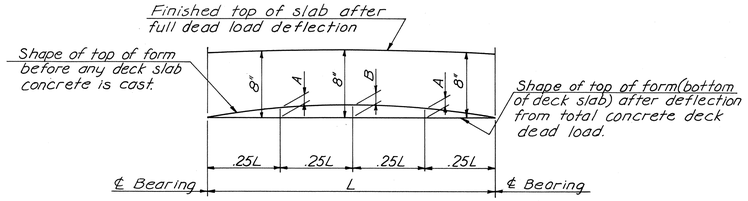
Bearing Type	No. Required
E-3	14
F-1	10
F-1M	4



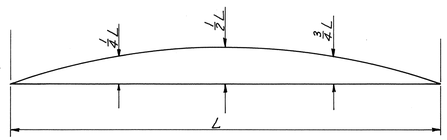
COVER PLATE DETAILS
Scale: 1" = 1'-0"



DEAD LOAD DEFLECTION DIAGRAM

Stringers	A	B
S1, S7, S8, S14	1 15/16"	1½"
S2 thru S6, S9 thru S13	1 15/16"	1¼"

NOTE TO CONTRACTOR:
The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load. In practice the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of the stringer, without alteration of the slab thickness.



CAMBER DIAGRAM

Stringers	¼L, ¾L	½L
S1, S6, S7	2 1/4"	3 3/16"
S3 thru S5	2 1/4"	3 1/8"
S8, S13, S14	2 1/4"	3 3/16"
S10 thru S12	2 1/4"	3 1/8"
S2 & S9	2 3/16"	3 1/16"

NOTE TO FABRICATOR:
The above stringers shall be fabricated with an upward camber amounting to (see table). This will provide approximate compensation for deflection under full dead load and for conformity with finished grade. Stringers which are not required to be shop cambered shall be turned so that any mill tolerance deviation from straightness will be in the direction shown by the camber diagram above.

GENERAL NOTES:

ROADWAY: One 30'-0" Clear roadway. Two 8'-0" sidewalks.

CAPACITY: Dead Load - Includes 15 lbs. per sq. ft. for future wearing surface.
Live Loads - HS 20-44 loading and B.P.R. modified for military vehicles.

SPECIFICATIONS:
GENERAL - Virginia Department of Highway Road and Bridge Specifications 1970
DESIGN - AASHO Standard Specifications for Highway Bridges, 1961 modified by Special Design Provisions.
WELDING - 1969 Standard Specifications for welded Highway and Railway Bridges of the American Welding Society.

CONTRACT SPECIAL PROVISIONS:

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: CITY OF RICHMOND

TEMPERATURE: The normal temperature referred to on the plan is 60 °F. The temperature range for movement is 0°F, to 120°F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Foundation material shall be kept dry and special attention is called to Section 401.05 of the General Specifications, and to the Contract Special Provisions, concerning preparation of foundations for footings.

CONCRETE NOTES:
Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a ¾" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete. (When gradient is over 2%.)
Finishing concrete surfaces: See the Standard Architectural Detail Sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall conform to ASTM A615 Grade 40. All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted.
All field connections shall be made with high strength bolts. High strength bolts shall be ⅞" diameter unless otherwise noted and shall conform to A.S.T.M. Specification A-325.

BENCH MARK: C-38. Monument located in walk N.E. Corner Cumberland and South Laurel. Elev. 176.83.

INDEX

NOTES:
Top of Pavement Elevations at ends of Deck along P.G.L. are given on Plan, Remaining Pavement Elevations are given on Sheet 7.
Indicates 2½"ϕ Cased Hole Boring.
Indicates 4"ϕ Cased Hole Boring.

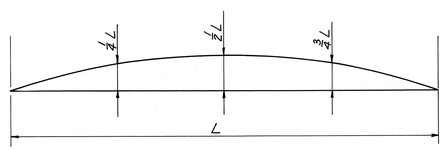
DEAD LOAD DEFLECTION DIAGRAM

Stringers	A	B
S1 thru S7	1/16"	1/8"
S8, S14	1"	1 1/16"
S9 thru S13	7/8"	1 1/16"
S15, S21	1 1/8"	2 1/16"
S16 thru S20	1 1/4"	1 1/4"

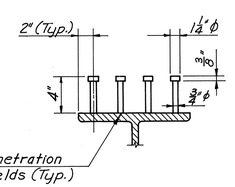
NOTE TO CONTRACTOR:
The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load. In practice the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of the stringer, without alteration of the slab thickness.



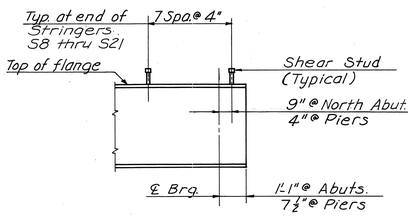
CAMBER DIAGRAM

Stringers	¼L, ¾L	½L
S8, S14	1 3/16"	1 1/8"
S9 thru S13	1 1/16"	1 1/16"
S15, S21	2"	2 1/16"
S16 thru S20	1 13/16"	2 3/16"

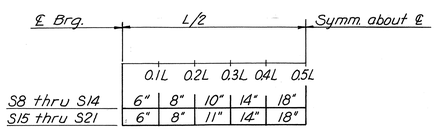
NOTE TO FABRICATOR:
The above stringers shall be fabricated with an upward camber amounting to (see table). This will provide approximate compensation for deflection under full dead load and for conformity with finished grade. Stringers which are not required to be shop cambered shall be turned so that any mill tolerance deviation from straightness will be in the direction shown by the camber diagram above.



SHEAR STUD DETAIL
Scale: 1½" = 1'-0"



DETAIL "A"
No Scale



SHEAR STUD SPACING
No Scale
Shear Stud spacing shown is maximum

Shear Stud Notes:
Capacity = 3400 lbs. per stud.
Three ⅞" diameter studs may be substituted at the same longitudinal spacing as shown for four ¾" diameter studs.
Stud rows to be placed perpendicular to ℄ stringer.
For end condition see Detail "A".

Notes:
Structural steel shall conform to ASTM Specifications A36 (latest revision).
For General Notes see Sheet 1.
For Superstructure Cross Section see Sheet 6.
For Diaphragm Details see Sheet 6.
For Utility Support Details see Sheet 6.
For Bearing Shoe Dimensions see Standard Sheet S1.

SLOPE PROTECTION NOTES:

The Item "Concrete Slope Protection" shall include the excavation of or the placing and compaction of any embankment material necessary to bring the surface of the paved slopes of the finished elevations shown on the plans.

"Concrete Slope Protection" shall be paid for at the contract unit price per square yard, which price shall include the concrete slab including wire mesh and joint filler.

The slab shall be constructed in 4'0"x4'0" panels, placed in horizontal courses, alternate panels poured in a staggered pattern with adjacent panels poured later. The slab shall be Class A3 concrete of such consistency that it can be placed without the use of top forms, the surface shall be finished with a wood float.

Reinforcement shall consist of wire mesh #6 gage, 6" c.c. each way, placed at the center of the slab, and continuous through construction joints.

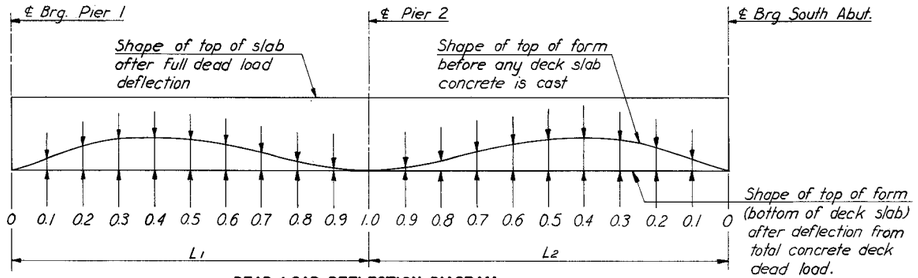
DEAD LOAD DEFLECTION DIAGRAM
UNIT 1

DEFLECTION SCHEDULE		
STR.	1/4 L & 3/4 L	1/2 L
S1-S8	1/4"	3/8"

NOTE TO CONTRACTOR:

The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.

In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.



DEAD LOAD DEFLECTION DIAGRAM

CAMBER DIAGRAM
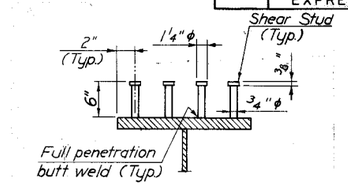
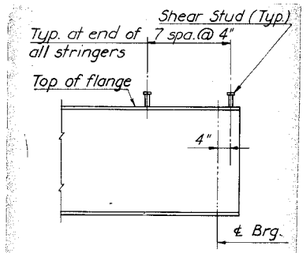
UNIT 2



SHEAR STUD DETAIL
No Scale



DETAIL "A"
No Scale

SHEAR STUD NOTE:

Capacity = 3,400 lbs. per stud.

The contractor may, if he elects, use three 7/8" diameter studs at the same longitudinal spacing in lieu of the four 3/4" diameter studs shown.

Stud rows shall be placed parallel to the main deck reinforcing.

CAMBER SCHEDULE			
STR.	1/4 L	1/2 L	3/4 L
S8	5/8"	1"	5/8"

NOTE TO FABRICATOR:

The above stringers shall be fabricated with an upward camber amounting to the tabulated value.

This will provide approximate compensation for deflection under full dead load and for conformity with finished grade.

Stringers which are not required to be shop cambered shall be turned so that any mill tolerance deviation from straightness will be in the direction shown by the camber diagram above.

Dimensions are in inches.

CAMBER SCHEDULE

DETAIL 1
Scale: ¾"=1'-0"

SLOPE PROTECTION NOTE:

The item "Cast-in-Place Concrete Slab Slope Protection" shall include the excavation of, or the placing and compaction of any embankment material necessary to bring the surface of the paved slopes to the finished elevations shown on the plans.

"Cast-in-Place Concrete Slab Slope Protection" shall be paid for at the contract unit price per square yard, which price shall include the concrete slab including wire mesh and joint filler.

The slab shall be constructed in 4'-0" x 4'-0" panels, placed in horizontal courses, alternate panels being poured in a staggered pattern with adjacent panels poured later. The slab shall be Class A3 concrete of such consistency that it can be placed without the use of top forms. The surface shall be finished with a wood float.

Reinforcing shall consist of wire mesh No. 6 gage, 6" c.c. each way, placed at the center of the slab, and continuous through construction joints.

SHEAR STUD DETAIL
No Scale

SHEAR STUD NOTE:
Capacity = 3,400 lbs. per stud.
The contractor may, if he elects, use three ¾" diameter studs at the same longitudinal spacing in lieu of the four ¾" diameter studs shown.
Stud rows shall be placed parallel to the main deck reinforcing.
Shear stud spacing shown is maximum spacing.

NOTE TO CONTRACTOR:
The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.
In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.

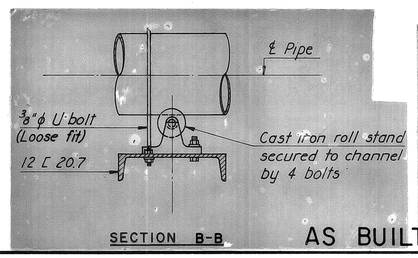
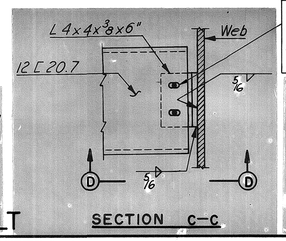
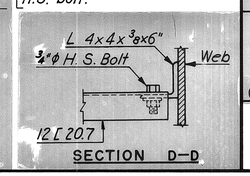
Provide 13/16" x 1/4" slots in ends of L 5 x 3 x 5/16 and 13/16" ϕ hole in L 4 x 4 x 3/8 x 6 for 3/4" ϕ H.S. bolt.



AS BUILT



Provide 13/16" x 1 1/4" slots in ends of 12 [20.7 and 13/16" ϕ hole in L 4 x 4 x 3/8 x 6 for 3/4" ϕ H.S. bolt.

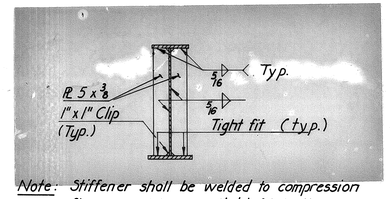


NOTE "A":
Dimension shown is measured from top of web to top of slab at the intersection of the centerline of stringer and the centerline of bearing. At exterior stringers this is measured to the cross slope extended. This dimension may be varied between bearings as required to care for variation in camber, except that no portion of the stringer flange may fall within the 8" slab.

NOTES:
For spacing and location of utility supports and diaphragms, see Framing Plan sheet.

For Basic Attachment Details for cement asbestos conduit, see Standard Conduit Installation Details sheet.

For details showing gas and water mains thru abutments, see Standard Utility Support Details At Bridge Abutments sheet.



Note: Stiffener shall be welded to compression flange and have a tight fit to the tension flange.

ELEVATION

DETAIL I
Scale: None
4" Slope pavement

SLOPE PROTECTION NOTE:

The item "Cast-in-Place Concrete Slab Slope Protection" shall include the excavation of, or the placing and compaction of any embankment material necessary to bring the surface of the paved slopes to the finished elevations shown on the plans.

"Cast-in-Place Concrete Slab Slope Protection" shall be paid for at the contract unit price per square yard, which price shall include the concrete slab including wire mesh and joint filler.

The slab shall be constructed in 4'-0" x 4'-0" panels, placed in horizontal courses, alternate panels being poured in a staggered pattern with adjacent panels poured later. The slab shall be Class A3 concrete of such consistency that it can be placed without the use of top forms. The surface shall be finished with a wood float.

Reinforcing shall consist of wire mesh No. 6 gage, 6" c.c. each way, placed at the center of the slab, and continuous through construction joints.

S2, S3, S6	1"	1½"
S9, S10, S13		

SHEAR STUD NOTE:
Capacity = 3,400 lbs. per stud.
The contractor may, if he elects, use three ⅞" diameter studs at the same longitudinal spacing in lieu of the four ¾" diameter studs shown.
Stud rows shall be placed parallel to the main deck reinforcing.
Shear stud spacing shown is maximum spacing.

COVER PLATE SCHEDULE				
STR.	COVER PL.	"L"	"a"	"b"
S1, S8	10½x1¾	5'-6"	5/8"	3/8"
S3, S10		5'-6

S4, S11		5'-6"		
S5, S12		5'-6"		
S6, S13	10½x1⅝	6'-0"	5/8"	3/8"

NOTE TO FABRICATOR:
The above stringers shall be fabricated with an upward camber amounting to the tabulated value.
This will provide approximate compensation for deflection under full dead load and for conformity with finished grade.
Dimensions are in inches.

NOTE TO CONTRACTOR:
The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.
In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.

NOTE TO FABRICATOR:
The above stringers shall be fabricated with an upward camber amounting to the tabulated value.
This will provide approximate compensation for deflection under full dead load and for conformity with finished grade.
Dimensions are in inches.

NOTE TO CONTRACTOR:
The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.
In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.

SPECIFICATIONS: GENERAL-Virginia Department of Highway Road and Bridge Specifications, 1970.
DESIGN-A.A.S.H.O. Standard Specifications for Highway Bridges, 1961, modified by Special Design Provisions.
WELDING-1969 Standard Specifications for welded Highway and Railway Bridges of the American Welding Society.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: CITY OF RICHMOND

TEMPERATURE: The normal temperature referred to on the plan is 60°F. The temperature range for movement is 0°F. to 120°F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Foundation material shall be kept dry and special attention is called to Section 401.05 of the General Specifications and to The Contract Special Provisions concerning preparation of foundations for footings.

CONCRETE NOTES: Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a ¾" chamfer or fillet unless otherwise noted. Care in the method of vibration, The use of low-slump concrete, and or other means shall be employed to prevent downgrade movement of newly placed slab concrete. (When gradient is over 2%).

Finishing concrete surfaces: See the Standard Architectural Detail Sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall Conform to ASTM A615 grade 40. All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted.

All Field connections shall be made with high strength bolts. High strength bolts shall be ⅞" diameter unless otherwise noted and shall conform to A.S.T.M. Specification A-325.
All shop welded web splices, flange splices and web to flange welds shall be made by the submerged arc process.

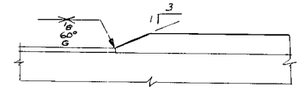
The stringers shall be fabricated with an upward camber amounting to the tabulated values. These values are in inches.
This will provide approximate compensation for deflection under full dead load and for conformity with finished grade.
The deflections anticipated to occur in the stringer upon placement of the total concrete deck dead load are equal to the sum of the values listed for "Slab" and "Curb and Parapet."
Deviations from exact camber of the stringers shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of the stringers.



SHOP FLANGE SPLICE DETAILS

① The first two spaces at the ends of the stringers shall be one-half of the remaining spaces.

② Stiffeners shall be relocated as required to clear web splice plates.

③ See Shear Stud Details At End Bearings.

SLOPE PROTECTION NOTE

The item "Cast-in-place Concrete Slab Slope Protection" shall include the excavation of, or the placing and compaction of any embankment material necessary to bring the surface of the paved slopes to the finished elevations shown on the plans.

"Cast-in Place Concrete Slab Slope Protection shall be paid for at the contract unit price per square yard, which price shall include the concrete slab including wire mesh and joint filler. The slab shall be constructed in 4'-0" x 4'-0" panels, placed in horizontal courses, alternate panels being poured in a staggered pattern with adjacent panels poured later. The slab shall be Class A3 Concrete of such consistency that it can be placed without the use of top forms, the surface shall be finished with a wood float.

Reinforcing shall consist of wire mesh No.6 gage, 6" C.C. each way, placed at the center of the slab, and continuous through construction joints.

GENERAL NOTES:

WIDTH: WIDENING OF 7'-0" TO THE SOUTH OF THE EXISTING STRUCTURE.

SPAN LAYOUT: 100.5'-77' CONTINUOUS STEEL PLATE GIRDER SPANS.

CAPACITY: HS20-44 LOADING AND ALTERNATE MILITARY LOADING. DESIGN LOADING INCLUDES 15 PSF FOR FUTURE WEARING SURFACE AND 20 PSF ALLOWANCE FOR CONSTRUCTION TOLERANCES AND CONSTRUCTION METHODS.

SPECIFICATIONS:

CONSTRUCTION: VIRGINIA DEPARTMENT OF TRANSPORTATION ROAD AND BRIDGE SPECIFICATIONS, 1987.

DESIGN: AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES, 1989, INCLUDING INTERIM SPECIFICATIONS, 1990 AND VDOT MODIFICATIONS.

STANDARDS: VIRGINIA DEPARTMENT OF TRANSPORTATION ROAD AND BRIDGE STANDARDS, 1989.

ALL DIMENSIONS ARE MEASURED HORIZONTALLY AND VERTICALLY UNLESS OTHERWISE SPECIFIED.

THESE PLANS ARE INCOMPLETE UNLESS ACCOMPANIED BY THE SUPPLEMENTAL SPECIFICATIONS AND SPECIAL PROVISIONS INCLUDED IN THE CONTRACT DOCUMENTS.

THE USE OF STAY-IN-PLACE FORMS WILL NOT BE PERMITTED.

ALL STRUCTURAL STEEL SHALL BE ASTM A36, EXCEPT AS NOTED.

CONCRETE IN SUPERSTRUCTURE SHALL BE CLASS A4. ALL OTHER CONCRETE SHALL BE CLASS A3.

DEFORMED REINFORCING BARS SHALL CONFORM TO ASTM A615, GRADE 60. ALL REINFORCING BAR DIMENSIONS ON THE DETAILED DRAWINGS ARE TO CENTERS OF BARS EXCEPT WHERE OTHERWISE NOTED AND ARE SUBJECT TO FABRICATION AND CONSTRUCTION TOLERANCES.

H-PILES HAVE A DESIGN CAPACITY OF 45 TONS PER PILE, AND SHALL BE DRIVEN TO REFUSAL.

PRIOR TO THE COMMENCEMENT OF ANY WORK THE CONTRACTOR SHALL FIELD VERIFY ALL DIMENSIONS AND ELEVATIONS OF THE EXISTING STRUCTURE AND REPORT TO THE ENGINEER ANY DISCREPANCIES BETWEEN FIELD MEASUREMENTS AND MEASUREMENT SHOWN ON THE CONTRACT PLANS.

THE CONTRACTOR SHALL COORDINATE CONSTRUCTION OF RETAINING WALL NO. 2 WITH THE BRIDGE B62 CONTRACTOR.
