GENERAL NOTES

ROADWAY CAPACITY: One 31'-6" and one 23'-6" clear roadway.
Dead Load-Includes 15 lbs. per sq. ft. for future wearing surface.
Live Loads-HS20-44 loading and B.P.R. modified for military vehicles.

SPECIFICATIONS:

GENERAL-Virginia Department of Highway Road and Bridge Specifications, 1970.
DESIGN-A.A.S.H.O. Standard Specifications for Highway Bridges, 1961, modified by Special Design Provisions.
WELDING-1969 Standard Specifications for Welded Highway and Railway Bridges of the American Welding Society.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: CITY OF RICHMOND

TEMPERATURE: The normal temperature referred to on the plan is 68°F. The temperature range for movement is 0°F to 120°F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

[redacted]

CONCRETE NOTES: Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a 3/4" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete, and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete (when gradient is over 2%).

Finishing Concrete Surfaces: See the Standard Architectural Details sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall conform to A.S.T.M. A615, Grade 40.
All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted.
All field connections shall be made with high strength bolts.
High strength bolts shall be 7/8" diameter unless otherwise noted and shall conform to A.S.T.M. Specifications A325.

BENCH MARKS: See Reference Ties and Field Control Data sheet in highway plans.
F30(Copper Weld Rod) Elevation 218.82

NOTES:

For anchor bolt details and treatment of pads, see Standard Shoe Details sheet.

For details of architectural treatment of piers, see Standard Architectural Details sheet.

FOUNDATION NOTES:

Footings shall be founded at the elevation shown on the Plans unless otherwise directed by the Engineer due to conditions at the site during construction. In such cases, the Engineer will determine the extent of redesign necessary and will advise the Contractor before construction begins.

All piles shall be 10 BP 42 Steel Piles (Design Capacity = 45 tons).

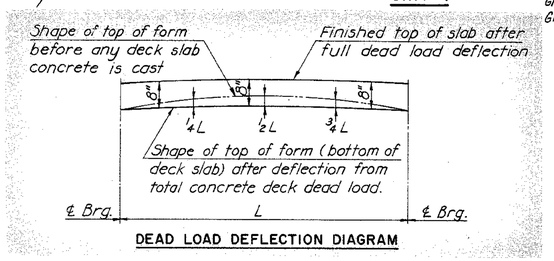
S2	2 5/8"	3½"	2 5/8"	S10	2 5/8"	3½"	2 5/8"
S3	2 5/8"	3½"	2 5/8"	S11	2 5/8"	3½"	2 5/8"
S4	2 5/8"	3½"	2 5/8"	S12	2 5/8"	3½"	2 5/8"
S5	2 5/8"	3½"	2 5/8"	S13	2 5/8"	3½"	2 5/8"
S6	2 5/8"	3½"	2 5/8"	S14	2 5/8"	3½"	2 5/8"
S7	2 5/8"	3½"	2 5/8"	S15	2 5/8"	3½"	2 5/8"
S8	2 5/8"	3½"	2 5/8"	S16	2 5/8"	3½"	2 5/8"

NOTE TO FABRICATOR:
The above stringers shall be fabricated with an upward camber amounting to the tabulated value.
This will provide approximate compensation for deflection under full dead load and for conformity with finished grade.
Dimensions are in inches.



DEAD LOAD DEFLECTION DIAGRAM

S5	1½"	2⅞"	S13	1½"	2⅞"
S6	1½"	2⅞"	S14	1½"	2⅞"
S7	1½"	2⅞"	S15	1½"	2⅞"
S8	1½"	2⅞"	S16	1½"	2⅞"

NOTE TO CONTRACTOR:
The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.
In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.

Shoe Notes:

Top of masonry plates, bottom of rocker plates and top and bottom of sole plates shall be planed, straightened or otherwise treated to secure true plane surfaces.

Contact surfaces noted on the plans with finish sumbols shall be finished in accordance with the American Standards Association surface roughness requirement as defined in ASA B461, Surface Roughness, Waviness and Lay, Part I.

The plates comprising the expansion shoes shall be set so as to be truly centered under full dead load of a temperture of 68°F.

Concrete pads shall be formed integral with abutment or pier and not less than ⅛" or more than ¼" above finished elevation. Dress down pads by rubbing, grinding or as otherwise approved by the Engineer, to true level surfaces at the finished elevation.

Anchor bolt assemblies shall conform to A.S.T.M. A-307 and shall be hot-dip galvanized conforming to A.S.T.M. A-153.

Templates shall be used to accurately set the anchor bolts.

Material for shoes (exclusive of self-lubricating plates) shall be high strength low alloy structural steel conforming to A.S.T.M. Specification A-588.

Material for self-lubricating plates shall be Leaded Tin Bronze conforming to A.S.T.M. Specification B22, alloy D modified to the extent that 1.5 to 2.5 percent lead is allowable.

Shoes shall be included with structural steel item for payment.

GENERAL NOTES :

SPECIFICATIONS :
A.R.E.A., current.
WELDING - 1969 Standard Specifications for welded Highway and Railway Bridges of the American Welding Society.

CONTRACT SPECIAL PROVISIONS
Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

LIVE LOAD :
Cooper's E-80

IMPACT :
Diesel impact plus rolling effect. Concrete Slab Derailment Impact :

$$LL \times \frac{LL}{DL + LL}$$

Structural Steel Derailment Impact :
0.9 x LL

DATUM :
CITY OF RICHMOND

TEMPERATURE :
The normal temperature referred to on the plan is 68°F. The temperature range for movement is 0°F, to 120°F.

DIMENSIONS :
All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION :
Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS :
Footings shall rest on firm material. Foundation material shall be kept dry and special attention is called to Section 401.05 of the General Specifications, and to the Contract Special Provisions, concerning preparation of foundations for footings.

CONCRETE NOTES :
Concrete in superstructure shall be Class A4 with a maximum slump of 2½ inches. All other concrete shall be Class A3. All exposed edges and corners shall have a ¾" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete, and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete. (When gradient is over 2%).

Finishing concrete surfaces : See the Standard Architectural Detail Sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall conform to A.S.T.M. A615, Grade 40. All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES :
Structural steel shall conform to A.S.T.M. Specification A36 except as Noted.

All Field connections shall be made with high strength bolts. High strength bolts shall be ⅞" diameter unless otherwise noted and shall conform to A.S.T.M. Specification A-325.

BENCH MARK :
See Reference Ties and Field Control Data sheet in highway plans.
F-17 (Copper Weld Rod) Elevation 139.03
F-20 (Copper Weld Rod) Elevation 145.80

INDEX

Note :
See sh. 2 for Slab Elevations and Estimated Quantities.

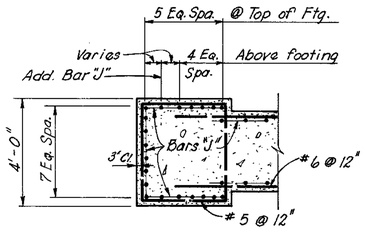
SECTION B - B

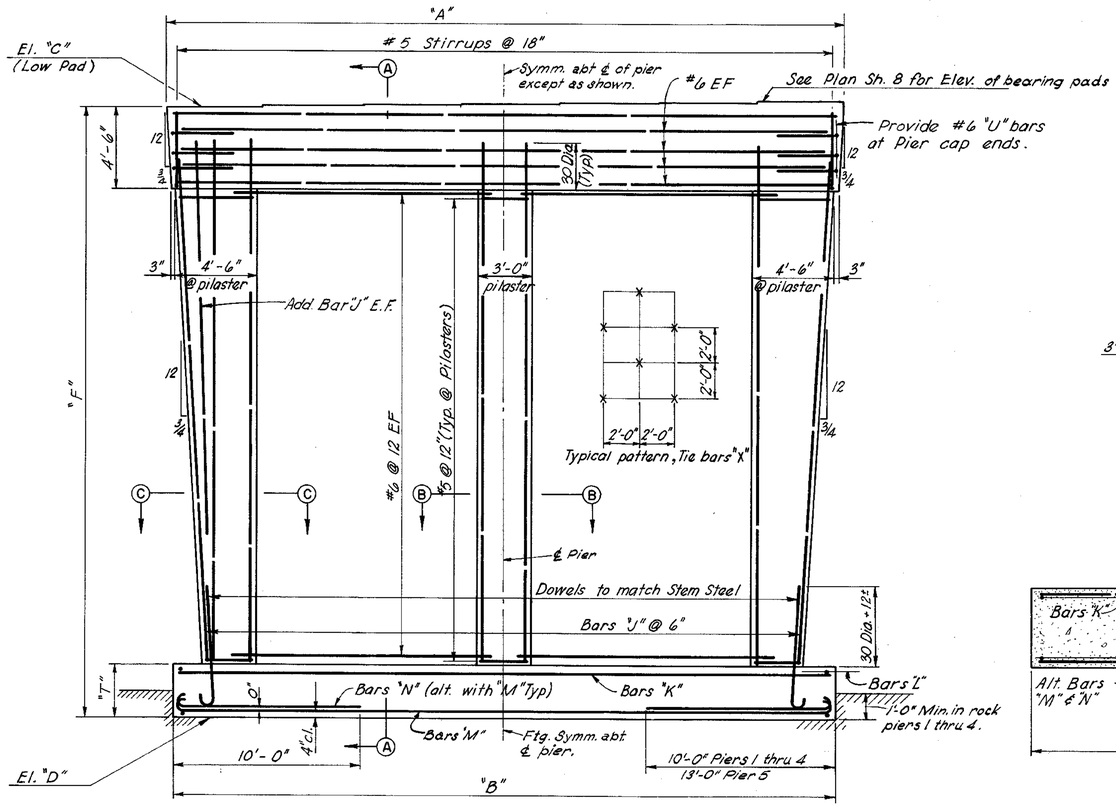


SECTION C - C

Note to Contractor

Attention is called to the apparent erratic location of the top of rock in the vicinity of Pier 5. If, after excavation for Pier 5, the majority of founding material located at Elevation 105 is rock, all pockets of decomposed material within the limits of the excavation shall be removed and backfilled with Class A3 concrete. Conversely, if the majority of founding material is decomposed rock, areas of projecting bedrock shall be removed to an elevation one foot below the footing elevation and backfilled to the footing elevation with a blanket of well compacted granular material similar in nature to the majority founding material.

Any additional excavation required by the above will be paid for at the unit price bid for Structure Excavation. Additional Class A3 concrete required, amounting to 1 cubic yard or more, will be paid for at the unit price bid for Concrete, Class A3, Substructures. No additional payment will be made for backfilling with granular material.



TYPICAL ELEVATION
(Looking ahead on stationing)

FIXED SHOE

Note:
Anchor Bolt for Fixed Shoes same as Anchor Bolt for Exp. Shoes except as shown.

FIXED SHOE
No Scale

Shoe Notes:

Top of masonry plates, bottom of rocker plates and top and bottom of sole plates shall be planed, straightened or otherwise treated to secure true plane surfaces.

Contact surfaces noted on the plans with finish symbols shall be finished in accordance with the American Standards Association surface roughness requirement as defined in ASA B46.1, Surface Roughness, Waviness and Lay, Part I.

The plates comprising the expansion shoes shall be set so as to be truly centered under full dead load at a temperture of 68°F.

Concrete pads shall be formed integral with abutment or pier and not less than ½" or more than 1" above finished elevation. Dress down pads by rubbing, grinding or as otherwise approved by the Engineer, to true level surfaces at the finished elevation.

Anchor bolt assemblies shall conform to A.S.T.M. A-307 and shall be hot-dip galvanized conforming to A.S.T.M. A-153.

Templates shall be used to accurately set the anchor bolts.

Material for shoes (exclusive of self-lubricating plates) shall be high strength low alloy structural steel conforming to A.S.T.M. Specification A-588.

Material for self-lubricating plates shall be Leaded Tin Bronze conforming to A.S.T.M. specification B22, alloy D modified to the extent that 1.5 to 2.5 percent lead is allowable.

Shoes shall be included with structural steel item for payment.

GENERAL NOTES:

ROADWAY — Twin Roadways 45'-0" clear.

CAPACITY — Dead Load-Includes 15 lbs. per sq. ft. for future wearing surface.
Live Loads-HS20-44 loading and B.P.R. Modified Loading for Military Vehicles.

SPECIFICATIONS — GENERAL - Virginia Department of Highway Road and Bridge Specifications, 1970.
DESIGN - A.A.S.H.O. Standard Specifications for Highway Bridges, 1961, modified by Special Design Provisions.
WELDING - 1969 Standard Specifications for Welded Highway and Railway Bridges of the American Welding Society.
ELECTRICAL - National Electrical Code, National Electrical Safety Code.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM — CITY OF RICHMOND

TEMPERATURE — The normal temperature referred to on the plans is 68°F. The temperature range for movement is 0°F to 120°F.

DIMENSIONS — All dimensions are measured horizontally and vertically unless otherwise noted.

FOUNDATIONS — All footing concrete shall be placed in the dry except where Class T3 Concrete is indicated on the plans or approved by the Engineer. Special attention is called to Sections 401.04 and 401.05 of the General Specifications, and to the Contract Special Provisions, concerning preparation of foundations for footings.

Because of the erratic nature of ground conditions at the site, elevations of the bottoms of the footings shown on the plans shall be considered approximate only. Should excavations at the time of construction reveal the foundations to be inadequate, redesign may be required.

CONCRETE NOTES — Concrete in superstructure shall be Class A4. All other concrete (except tremie seal concrete) shall be Class A3. All exposed edges and corners shall have a ¾" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete, and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete when the gradient is over 2%.

All reinforcing steel shall conform to A.S.T.M. A-615, Grade 40. reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be as shown on the plans.

STEEL NOTES — Structural steel shall conform to A.S.T.M. Specification A36 except as noted.

All field connections shall be made with ⅞" diameter high strength bolts unless otherwise noted. Bolts shall conform to A.S.T.M. Specification A-325.

DETAIL "A"
Not to Scale

SHEAR STUD NOTE:

Capacity = 34.0 kips per stud.

The contractor may, if he elects, use three ⅞" diameter studs of the same longitudinal spacing in lieu of four ¾" diameter studs shown.

Stud rows shall be placed parallel to the main deck reinforcing.

Shear stud spacing shown is maximum spacing.

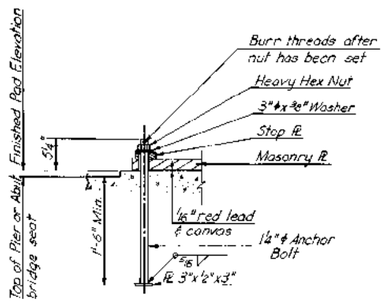
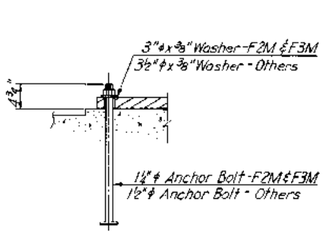
Scale: ¾"=1"



EXPANSION SHOE

ANCHOR BOLT DETAIL
No Scale



FIXED SHOE

Note:
Anchor Bolt for Fixed Shoes same as Anchor Bolt for Exp Shoes except as shown.

FIXED SHOE
No Scale

Shoe Notes:

Top of masonry plates, bottom of rocker plates and top and bottom of sole plates planed, straightened or otherwise treated to secure true level surfaces.

Contact surfaces noted on the plans with finish symbols shall be finished in accordance with the American National Standards Institute surface roughness requirement, as defined in ASA B46.1 Surface Roughness, Waviness and Lay, Part I.

The plates comprising the expansion shoes shall be set so as to be truly centered under full dead load at a temperture of 68°F.

Concrete pads shall be formed integral with abutment or pier and not less than ⅛" or more than ¼" above finished elevation. Dress down pads by rubbing, grinding or as otherwise approved by the Engineer, to true level surfaces at the finished elevation.

Anchor bolt assemblies shall conform to A.S.T.M. A-307 and shall be hot-dip galvanized conforming to A.S.T.M. A-153.

Templates shall be used to accurately set the anchor bolts.

Material for shoes (exclusive of self-lubricating plates) shall be high strength low alloy structural steel conforming to A.S.T.M. Specification A-588.

Material for self-lubricating plates shall be Leaded Tin Bronze conforming to A.S.T.M. Specification B22, alloy D modified to the extent that 1.5 to 2.5 percent lead is allowable.

Shoes shall be included with structural steel item for payment.

SCALE: 1/2" = 1'-0"

NOTE TO CONTRACTOR

The deflections [illegible] are those anticipated to occur in the stringer upon placement of the total concrete dead load. In practice the stringers, in place, are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete fillet between the bottom of the slab & the top of stringer, without alteration of the slab thickness.

S4	9 3/4"		

Note "A"

"A" Dimension is given at the intersection of the ℄ Stringer and ℄ Bearing. Dimension shown is measured from top of top flange to construction joint for Fascia Stringers with 1'-9" overhang (see deck plan) and from top of top flange to top of deck for all other stringers. This dimension may vary between bearings due to change in top flange thickness or Variation in Camber, except that no portion of the stringer flange may fall within the slab.

** The total weight of structural steel, 3,541,900 lbs, includes the shoes.

GENERAL NOTES

WIDTH: WIDENING OF 27'-0" TO THE EAST AND WEST OF THE EXISTING STRUCTURE.

SPAN LAYOUT: 18-SIMPLE SPAN, STEEL PLATE GIRDER WITH SPANS OF 2-80 FEET, 7-100 FEET, 1-100 FEET AND 8-123.5 FEET.

CAPACITY: HS20-44 LOADING AND ALTERNATE MILITARY LOADING. DESIGN LOADING INCLUDES 15 P.S.F. FOR FUTURE WEARING SURFACE AND 20 P.S.F. ALLOWANCE FOR CONSTRUCTION TOLERANCES AND CONSTRUCTION METHODS.

SPECIFICATIONS:

CONSTRUCTION: VIRGINIA DEPARTMENT OF HIGHWAYS AND TRANSPORTATION ROAD AND BRIDGE SPECIFICATIONS, 1982.

DESIGN: AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES, 1983, INCLUDING INTERIM SPECIFICATIONS, 1984, AND VDHT MODIFICATIONS.

STANDARDS: VIRGINIA DEPARTMENT OF HIGHWAYS AND TRANSPORTATION ROAD AND BRIDGE STANDARDS, 1982.

ALL DIMENSIONS ARE MEASURED HORIZONTALLY AND VERTICALLY UNLESS OTHERWISE SPECIFIED.

THESE PLANS ARE INCOMPLETE UNLESS ACCOMPANIED BY THE SUPPLEMENTAL SPECIFICATIONS AND SPECIAL PROVISIONS INCLUDED IN THE CONTRACT DOCUMENTS.

ALL STRUCTURAL STEEL SHALL BE A36, EXCEPT AS NOTED.

FINISH PAINT SHALL BE LIGHT GREEN, FEDERAL STANDARD 595-24227.

CONCRETE IN SUPERSTRUCTURE SHALL BE CLASS A4. ALL OTHER CONCRETE, EXCEPT TREMIE SEAL CONCRETE, SHALL BE CLASS A3.

ALL DEFORMED REINFORCING BARS SHALL CONFORM TO ASTM A615, GRADE 60.

ALL REINFORCING BAR DIMENSIONS ON THE DETAILED DRAWINGS ARE TO CENTER OF BARS EXCEPT WHERE OTHERWISE NOTED AND ARE SUBJECT TO FABRICATION AND CONSTRUCTION TOLERANCES.

ALL FOOTING CONCRETE SHALL BE PLACED IN THE DRY EXCEPT WHERE CLASS T3 CONCRETE IS INDICATED ON THE PLANS OR APPROVED BY THE ENGINEER.

BECAUSE OF THE ERRATIC NATURE OF THE GROUND CONDITIONS AT THE SITE, ELEVATIONS OF THE BOTTOM OF THE FOOTINGS SHOWN ON THE PLANS SHALL BE CONSIDERED APPROXIMATE ONLY. DURING CONSTRUCTION SHOULD EXCAVATION OPERATIONS REVEAL THAT THE FOUNDATION IS INADEQUATE, REDESIGN MAY BE REQUIRED AT THE DISCRETION OF THE ENGINEER.

STEEL PILES 10BP42 ARE DESIGNED FOR A CAPACITY OF 55 TONS PER PILE. ALL PILES SHALL BE DRIVEN TO PRACTICAL REFUSAL.

PRIOR TO THE COMMENCEMENT OF ANY WORK THE CONTRACTOR SHALL FIELD VERIFY ALL DIMENSIONS AND ELEVATIONS OF THE EXISTING STRUCTURE AND REPORT TO THE ENGINEER ANY DISCREPANCIES BETWEEN FIELD MEASUREMENTS AND MEASUREMENTS SHOWN ON THE CONTRACT PLANS.

△ ELEVATIONS TAKEN FROM CITY OF RICHMOND DATUM.

NOTES:

Fill slots and holes in masonry plate around anchor bolts with a nonhardening caulking compound or elastic joint sealer.

For expansion bearing, bevel sole plate to match grade.

Steel in bearing may be ASTM A36, A572, Grade 50, or A588 and shall be painted. Surface of sole plate and masonry plate in contact with bronze plates shall not be painted, but coated with multipurpose grease before shipment. Prior to assembly in place these surfaces shall be thoroughly coated with additional antioxidant lubricant furnished by the manufacturer.

Radius may be machined to compensate for grade.

Bearing shall be set so that at 68°F, it is at the midpoint of its movement.

For Expansion bearing, 15" Radius tolerances:
Sole Plate -0", +.01"
Bronze Plate -.01" +0"

INDEX

GENERAL NOTES

ROADWAY: Two roadways 24'-0" and 36'-0" clear. Two 5'-0" side walks and 4'-0" median with a 1" joint.

CAPACITY: Dead Load Includes 15 lbs. per sq. ft. for future wearing surface.
Live Loads - HS20-44 loading.

SPECIFICATIONS:

GENERAL: Virginia Department of Highway Road and Bridge Specifications 1970.
DESIGN: A.A.S.H.O. Standard Specifications for Highway Bridges 1969 and 1970-72 Interim Specification, modified by Special Design Provisions.
WELDING: 1972 Structural Welding Code of the American Welding Society.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: City of Richmond

TEMPERATURE: The normal temperature referred to on the plan is 60°F. The temperature range for movement is 0°F to 120°F

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template, shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Foundation material shall be dry and special attention is called to Section 401.05 of General Specifications and to the Contract Special Provisions, concerning preparation of foundations for footings.

CONCRETE NOTES:

Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a ¾" chamfer or fillet unless otherwise noted.
Finishing concrete surfaces: See the Standard Architectural Detail Sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall be intermediate grade All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES:

Structural steel shall conform to A.S.T.M. Specification A36 except as noted.
All field connections shall be made with high strength bolts. High strength bolts shall be ¾" diameter unless otherwise noted and shall conform to A.S.T.M. Specification A-325.

BENCH MARK: 7 B-12 Copperweld rod in west end of median on Douglasdale Road. Elev. 192.01

Note:
Stringers having a total camber of less than 1" are not required to be shop cambered, but should be turned so that any mill tolerance deviation from straightness will be in the direction shown by the Camber diagram.
If stringers are not cambered distance top of stringers to top of slab will vary along the stringer in accordance with the offset dimensions shown in the Camber diagram, and with a minimum distance as shown in cross-section on Sheet 7.

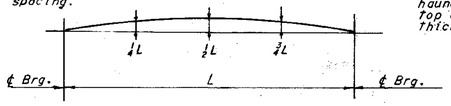
NOTE TO CONTRACTOR

Deflections given are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.
In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided by adjusting forms to vary the thickness of the concrete haunch between the bottom of the slab and the top of stringer, without altering the slab thickness.

SHEAR STUD NOTE

Stud rows shall be placed parallel to the main deck reinforcing.
Shear stud spacing shown is maximum spacing.



CAMBER DIAGRAM

No Scale

NOTE TO FABRICATOR

Stringers shall be fabricated with an upward camber amounting to the tabulated values. This will provide approximate compensation for deflection under full dead load and for conformity with finished grade.
Dimensions are in inches.

FIXED SHOE

ANCHOR BOLT DETAIL
No Scale

Note:
Anchor Bolt for Fixed Shoes same as Anchor Bolt for Exp. Shoes except as shown.

Shoe Notes:

Materials for shoes (exclusive of self-lubricating plates) shall be high strength low alloy structural steel conforming to A.S.T.M. Specifications A588.
Top of masonry plates, bottom of rocker plates and top and bottom of sole plates shall be planed, straightened or otherwise treated to secure true plane surfaces.
Contact surfaces noted on the plans with finish symbols shall be finished in accordance with the American Standards Association surface roughness requirement as defined in A.S.A. B46.1, Surface Roughness, Waviness and Lay, Part I.
The plates comprising the expansion shoes shall be set so as to be truly centered under full dead load at a temperture of 68°F.
Concrete pads shall be formed integral with abutment or pier and not less than ⅛" or more than ¼" above finished elevation. Dress down pads by rubbing, grinding or as otherwise approved by the Engineer, to true level surfaces at the finished elevation.
Anchor bolt assemblies shall conform to A.S.T.M. A-307-66 and shall be hot-dip galvanized conforming to A.S.T.M. A-153-66.
Templates shall be used to accurately set the anchor bolts.
Materials for self-lubricating plates shall be lead Tin Bronze conforming to A.S.T.M. Specifications B22, alloy D modified to the extent that 1.5 to 2.5 percent lead is allowable.
Shoes shall be included with structural steel item for payment.

LIMITS OF EXCAVATION

GENERAL NOTES

ROADWAY: One 28'-0" clear roadway. Two 5'-0" sidewalks

CAPACITY: Dead Load includes 15 lbs. per sq. ft. for future wearing surface.
Live Loads - HS20-44 loading.

SPECIFICATIONS: GENERAL: Virginia Department of Highway Road and Bridge Specifications 1970.
DESIGN: A.A.S.H.O. Standard Specifications for Highway Bridges 1961, modified by Special Design Provisions.
WELDING: 1969 Standard Specifications for Welded Highway and Railway Bridges of the American Welding Society.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: City of Richmond

TEMPERATURE: The normal temperature referred to on the plan is 68°F. The temperature range for movement is 0°F to 120°F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Foundation material shall be dry and special attention is called to Section 401.05 of General Specifications and to the Contract Special Provisions, concerning preparation of foundations for footings.

CONCRETE NOTES: Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a 1" chamfer or fillet unless otherwise noted. Care in the method of fabrication, the use of low-slump concrete, and other means shall be employed to prevent downgrade movement of newly placed slab concrete.
Finishing Concrete Surfaces: See the Standard Architectural Detail Sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall conform to A.S.T.M. A615, Grade 40
All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted.
All field connections shall be made with high strength bolts. High strength bolts shall be ⅞" diameter unless otherwise noted and shall conform to A.S.T.M. Specification A 325.

BENCH MARK: A-16 Copperweld rod N.W. of R.R. Bridge on Douglasdale. Elev. 213.60

⊕ Boring, denotes 2½"ϕ Cased hole

EXPANSION SHOE

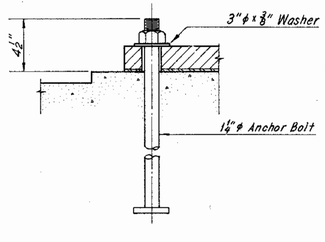
ANCHOR BOLT DETAIL

FIXED SHOE



FIXED SHOE

Note: Anchor Bolt for Fixed Shoes same as Anchor Bolt for Exp. Shoes except as shown.

FIXED MODIFIED SHOE

Shoe Notes:

Top of masonry plates, bottom of rocker plates and top and bottom of sole plates shall be planed, straightened or otherwise treated to secure true plane surfaces.

Contact surfaces noted on the plans with finish symbols shall be finished in accordance with the American Standards Association surface roughness requirement as defined in ASA B45.1, Surface Roughness, Waviness and Lay, Part I.

The plates comprising the expansion shoes shall be set so as to be truly centered under full dead load at a temperature of 68°F.

Concrete pads shall be formed integral with abutment or pier and not less than 1" or more than 4" above finished elevation. Dress down pads by rubbing, grinding or as otherwise approved by the Engineer, to true level surfaces at the finished elevation.

Anchor bolt assemblies shall conform to A.S.T.M. A-307 and shall be hot dipped galvanized, conforming to A.S.T.M. A-153.

Templates shall be used to accurately set the anchor bolts.

Material for shoes (exclusive of self-lubricating plates) shall be high strength low alloy structural steel conforming to A.S.T.M. specification A-588.

Material for self-lubricating plates shall be Leaded Tin Bronze conforming to A.S.T.M. specification B22, alloy D modified to the extent that 1.5 to 2.5 percent lead is allowable.

Shoes shall be included with structural steel item for payment.

CAMBER DIAGRAM
No Scale

NOTE TO FABRICATOR

Stringers shall be fabricated with an upward camber amounting to the tabulated value. This will provide approximate compensation for deflection under full dead load and for conformity with finished grade. Stringers having a total camber of less than 1" are not required to be shop cambered, but should be turned so that any mill tolerance deviation from straightness will be in the direction shown by the Camber diagram. If stringers are not cambered, distance top of stringers to Top of slab will vary along the stringer in accordance with the offset dimensions shown in the Camber diagram, and with a minimum distance as shown in cross-section on Sheet 9.

DETAIL A
No Scale

SHEAR STUD NOTE

Capacity = 3,400 lbs. per stud. The contractor may, if he elects, use three ⅞" diameter studs at the same longitudinal spacing in lieu of the four ¾" diameter studs shown. Stud rows shall be placed parallel to the main deck reinforcing. Shear stud spacing shown is maximum spacing.

** Spacing begins at termination of 7 spaces @ 4" as shown in Detail A.*

Note: For Superstructure Structural steel quantities see Sheet 1. For Standard Shoe details see Sheet 51. For Framing details see Sheet 9. For Joint details see Sheets 11 and 12. This sheet must be worked with sheets 2, 3, 4, 6, & 7.

NOTE TO CONTRACTOR

Deflections given are those anticipated to occur in the stringer upon placement of the total concrete deck dead load. In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided by adjusting forms to vary the thickness of the concrete haunch between the bottom of the slab and the top of stringer, without altering the slab thickness.

GENERAL NOTES

ROADWAY: 36'-4" Face of rail to edge of sidewalk.

CAPACITY: Dead Load-Includes 15 lbs. per sq. ft. for future wearing surface. Live Loads-HS20-44 loading and B.P.R. modified for military vehicles.

SPECIFICATIONS: GENERAL-Virginia Department of Highway Road and Bridge Specifications, 1970.
DESIGN-A.A.S.H.O. Standard Specifications for Highway Bridges, 1969 and 1970-72 Interim Specifications, modified by Special Design Provisions.
WELDING: 1972 Structural Welding Code of the American Welding Society.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: CITY OF RICHMOND

TEMPERATURE: The normal temperature referred to on the plan is 60° F. The temperature range for movement is 0° F. to 120° F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Found. mat'l. shall be kept dry & special attn. is called to Sec. 401.05 of the Gen. Specs. & to the Contract Special Prov. concerning preparation of found. for ftgs.

CONCRETE NOTES: Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a ¾" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete, and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete. (When gradient is over 2%).

Finishing concrete surfaces: See the Standard Architectural Detail Sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall be intermediate grade. All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted.

All Field connections shall be made with high strength bolts. High strength bolts shall be ¾" diameter unless otherwise noted and shall conform to A.S.T.M. Specification A-325.

BENCH MARK: C-11. Copper Weld Rod, South side of Maplewood Ave. at Belmont Ave. Elev. 215.37.

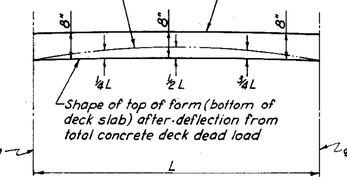
Shape of top of form before any deck slab concrete is cast

Finished top of slab after full dead load deflection



DEAD LOAD DEFLECTION DIAGRAM

NOTE TO CONTRACTOR

The given deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.

In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.

DEFLECTION SCHEDULE

GENERAL NOTES

ROADWAY: One 36'-0" Clear roadway. Two 8'-0" sidewalks.

CAPACITY: Dead Load-Includes 15 lbs. per sq. ft. for future wearing surface. Live Loads-HS20-44 loading and B.P.R. modified for military vehicles.

SPECIFICATIONS: GENERAL-Virginia Department of Highway Road and Bridge Specifications, 1970.
DESIGN-A.A.S.H.O. Standard Specifications for Highway Bridges. 1969 and 1970-72 Interim Specifications, modified by Special Provision.
WELDING- 1972 Structural Welding Code of the American Welding Society

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: CITY OF RICHMOND

TEMPERATURE: The normal temperature referred to on the plan is 60° F. The temperature range for movement is 0° F. to 120° F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Found. mat'l. shall be kept dry & special attn. is called to Sec. 401.05 of the Gen. Specs. & to the Contract Special Prov. concerning preparation of found. for ftgs.

CONCRETE NOTES: Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a ¾" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete, and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete. (When gradient is over 2%).

Finishing concrete surfaces: See the Standard Architectural Detail Sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall be intermediate grade. All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted.

All Field connections shall be made with high strength bolts. High strength bolts shall be ⅞" diameter unless otherwise noted and shall conform to A.S.T.M. Specification A-325. All shop welded web splices, flange splices and web to flange welds shall be made by the submerged arc process.

BENCH MARK: B-13. Copper Weld Rod, N.E. corner of McCloy and Grant St. Elev. 204.98'

◔ Indicates 2½" ø cased hole boring.

NOTE TO CONTRACTOR

The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.
In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.

NOTE TO FABRICATOR

The above stringers shall be fabricated with an upward camber amounting to the tabulated value.
This will provide approximate compensation for deflection under full dead load and for comformity with finished grade.
Dimensions are in inches.

Note:
For Gas and Water support details see Standard Sheet S11.

GENERAL NOTES:

ROADWAY: One 30'-0" Clear roadway. Two 8'-0" sidewalks.

CAPACITY: Dead Load - Includes 15 lbs. per sq. ft. for future wearing surface.
Live Loads - HS 20-44 loading and B.P.R. modified for military vehicles.

SPECIFICATIONS:

GENERAL - Virginia Department of Highway Road and Bridge Specifications 1970
DESIGN - AASHO Standard Specifications for Highway Bridges, 1961 modified by Special Design Provisions.
WELDING - 1969 Standard Specifications for welded Highway and Railway Bridges of the American Welding Society.

CONTRACT SPECIAL PROVISIONS:

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: CITY OF RICHMOND

TEMPERATURE: The normal temperature referred to on the plan is 60 °F. The temperature range for movement is 0°F. to 120°F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Foundation material shall be kept dry and special attention is called to Section 401.05 of the General Specifications, and to the Contract Special Provisions, concerning preparation of foundations for footings.

CONCRETE NOTES:

Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a ¾" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete. (When gradient is over 2%.)
Finishing concrete surfaces: See the Standard Architectural Detail Sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall conform to ASTM A615 Grade 40. All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted.
All field connections shall be made with high strength bolts. High strength bolts shall be ⅞" diameter unless otherwise noted and shall conform to A.S.T.M. Specification A-325.

BENCH MARK: C-38. Monument located in walk N.E. Corner Cumberland and South Laurel. Elev. 176.83.

INDEX

NOTES:
Top of Pavement Elevations at ends of Deck along P.G.L. are given on Plan, Remaining Pavement Elevations are given on Sheet 7.

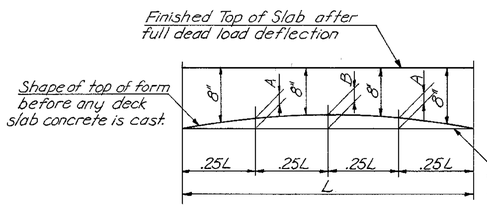
S16, S18, S24, S34, S37, S38	2 5/16"	3 1/4"	2 3/16"
S17, S19 thru S23, S25, S35, S36	2 1/16"	3 3/8"	2 1/16"
S26 thru S29, S40 thru S43	2 5/8"	3 11/16"	2 3/8"
S30, S44	2 13/16"	4 1/8"	2 13/16"
S31 thru S33	2 1/8"	3"	2 1/8"
S39	2 1/2"	3 1/2"	2 1/4"
S45	3 3/16"	4 1/2"	3 1/16"

NOTE TO FABRICATOR:
The above stringers shall be fabricated with an upward camber amounting to (see table). This will provide approximate compensation for deflection under full dead load and for conformity with finished grade.



DEAD LOAD DEFLECTION DIAGRAM
No Scale

Stringers	A	B
S1 thru S15	1 7/16"	1/8"
S16 thru S18, S31	1 7/16"	2"
S19, S20, S24, S34, S37, S38	1 3/8"	2 1/16"
S21, S25 thru S29, S36, S39 thru S42	1 1/16"	2 3/16"
S30	2 1/4"	3 1/2"
S32, S33	1 7/16"	1 1/2"
S43, S44	2"	2 13/16"
S45	2 7/16"	3 3/8"
S22, S23, S35	1 1/2"	2 7/16"

NOTE TO CONTRACTOR:
The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck load. In practice, the stringers in place, are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of the stringer, without alteration of the slab thickness.

Shoe Notes

Material for shoes (exclusive of self-lubricating plates) shall be high strength low alloy structural steel conforming to ASTM specification A-588

Material for self-lubricating plates shall be Leaded Tin Bronze conforming to ASTM specification B22, Alloy D modified to the extent that 1.5 to 2.5 percent lead is allowable.

Shoes shall be included with structural steel item for payment.

Top of masonry plates, bottom [illegible] plates and top and bottom of sole plates shall be planed, straightened or otherwise treated to secure true plane surfaces.

Contact surfaces noted on the plans with finish symbols shall be finished in accordance with the American Standards Association surface roughness requirement as defined in A.S.A. B.46.1 Surface Roughness, Waviness and Lay, Part I.

The plates comprising the expansion shoes shall be set so as to be truly centered under full dead load at a temperture of 60°F.

Concrete pads shall be formed integral with abutment or pier and not less than ⅛" or more than ¼" above finished elevation. Dress down pads by rubbing, grinding or as otherwise approved by the Engineer, to true level surfaces at the finished elevation.

Anchor bolt assemblies shall conform to A.S.T.M. A-307 and shall be hot-dip galvanized conforming to A.S.T.M. A-153.

Templates shall be used to accurately set the anchor bolts.

GENERAL NOTES

ROADWAY CAPACITY: One 42'-0" clear roadway. Two 5'0" sidewalks. Dead Load-Includes 15 lbs. per sq.ft. for future wearing surface. Live Loads-HS20-44 loading and B.P.R. modified for military vehicles.

SPECIFICATIONS: GENERAL-Virginia Department of Highway Road and Bridge Specifications, 1970. DESIGN-A.A.S.H.O. Standard Specifications for Highway Bridges, 1961, modified by Special Design Provisions. WELDING-1969 Standard Specifications for Welded Highway and Railway Bridges of the American Welding Society.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: CITY OF RICHMOND

TEMPERATURE: The normal temperature referred to on the plan is 60°F. The temperature range for movement is 0°F to 120°F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Foundation material shall be kept dry and special attention is called to Sections 401.05 and 401.06 of the General Specifications and to the Contract Special Provisions concerning preparation of foundations for footings.

CONCRETE NOTES: Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a 3/4" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete, and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete (when gradient is over 2%).

Finishing Concrete Surfaces: See the Standard Architectural Details sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall conform to ASTM A615 Grade 40 All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted. All field connections shall be made with high strength bolts. High strength bolts shall be 7/8" diameter unless otherwise noted and shall conform to A.S.T.M. Specifications A325.

BENCH MARKS: See Reference Ties and Field Control Data sheet in highway plans.

DEAD LOAD DEFLECTION DIAGRAM

UNIT 1

DEFLECTION SCHEDULE		
STR.	1/4 L & 3/4 L	1/2 L
S1-S8	1/4"	3/8"

NOTE TO CONTRACTOR:

The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.

In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.

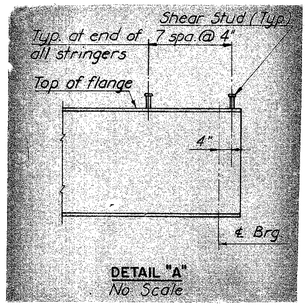
SHEAR STUD DETAIL

No Scale



DETAIL "A"

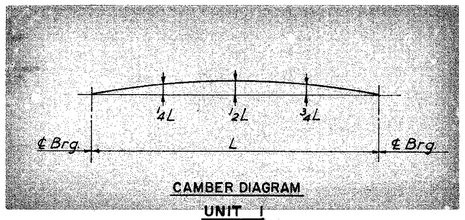
No Scale

SHEAR STUD NOTE:

Capacity = 3,400 lbs. per stud.

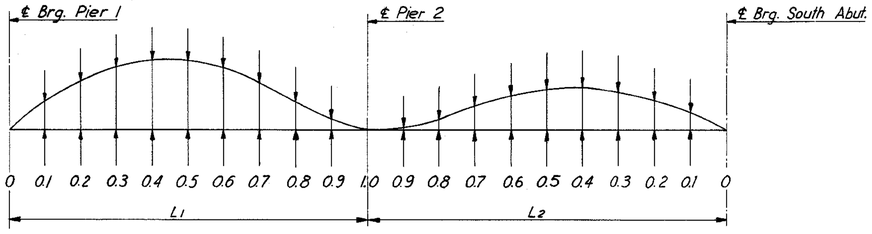
The contractor may, if he elects, use three 2" diameter studs at the same longitudinal spacing in lieu of the four 3" diameter studs shown.

Stud rows shall be placed parallel to the deck reinforcing.



CAMBER DIAGRAM

UNIT 1



CAMBER DIAGRAM

UNIT 2

CAMBER SCHEDULE			
STR.	1/4 L	1/2 L	3/4 L
S8	5/8"	1"	5/8"

NOTE TO FABRICATOR:

The above stringers shall be fabricated with an upward camber amounting to the tabulated value.

This will provide approximate compensation for deflection under full dead load and for conformity with finished grade.

Stringers which are not required to be shop cambered shall be turned so that any mill tolerance deviation from straightness will be in the direction shown by the camber diagram above.

Dimensions are in inches.

TABLE A	
STRINGER	DIM "A"
S1-S8	10⅜"
S9-S16	10½"

NOTE "A":
Dimension shown is measured from top of stringer to top of slab at the intersection of the centerline of stringer and the centerline of bearing. At exterior stringers this is measured to the cross slope extended. This dimension may be varied between bearings as required to care for variation in camber, except that no portion of the stringer flange may fall within the 8" slab.

FIXED SHOE

Note:
Anchor Bolt for Fixed Shoes same as Anchor Bolt for Exp. Shoes except as shown.

FIXED MODIFIED SHOE
No Scale

Shoe Notes:

Material for shoes (exclusive of self-lubricating plates) shall be structural carbon steel conforming to requirements of A.S.T.M. Specifications A242-66T and shall have a corrosion resistance equal to a minimum of four times that of A.S.T.M.-A7 steel as determined by a salt spray test conforming to A.S.T.M. Method B287-62.

Top of masonry plates, bottom of rocker plates and top and bottom of sole plates shall be planed, straightened or otherwise treated to secure true plane surfaces.

Contact surfaces noted on the plans with finish symbols shall be finished in accordance with the American Standards Association surface roughness requirement as defined in A.S.A. B46.1-55, Surface Roughness, Waviness and Lay, Part I.

The plates comprising the expansion shoes shall be set so as to be truly centered under full dead load at a temperture of 60°F.

Concrete pads shall be formed integral with abutment or pier and not less than 1/8" or more than 1/4" above finished elevation. Dress down pads by rubbing, grinding or as otherwise approved by the Engineer, to true level surfaces at the finished elevation.

Anchor bolt assemblies shall conform to A.S.T.M. A-307-66 and shall be hot-dip galvanized conforming to A.S.T.M. A-153-66.

Templates shall be used to accurately set the anchor bolts.

RICHMOND EXPRESSWAY SYSTEM			
SECTION	PROJECT	SHEET NO.	TOTAL SHEETS
9	DOWNTOWN EXPRESSWAY	140	

GENERAL NOTES

ROADWAY CAPACITY: One 42'-0" clear roadway. Two 5'0" sidewalks. Dead Load-Includes 15 lbs. per sq.ft. for future wearing surface. Live Loads-HS20-44 loading and B.P.R. modified for military vehicles.

SPECIFICATIONS:
GENERAL-Virginia Department of Highway Road and Bridge Specifications, 1970.
DESIGN-A.A.S.H.O. Standard Specifications for Highway Bridges, 1961, modified by Special Design Provisions.
WELDING-1969 Standard Specifications for Welded Highway and Railway Bridges of the American Welding Society.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: CITY OF RICHMOND

TEMPERATURE: The normal temperature referred to on the plan is 60°F. The temperature range for movement is 0°F to 120°F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Foundation material shall be kept dry and special attention is called to Sections 401.05 and 401.06 of the General Specifications and to the Contract Special Provisions concerning preparation of foundations for footings.

CONCRETE NOTES: Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a 3/4" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete, and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete (when gradient is over 2%).

Finishing Concrete Surfaces: See the Standard Architectural Details sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall conform to ASTM A615 Grade 40. All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted.
All field connections shall be made with high strength bolts.
High strength bolts shall be 7/8" diameter unless otherwise noted and shall conform to A.S.T.M. Specifications A325.

BENCH MARKS: See Reference Ties and Field Control Data sheet in highway plans.

DEAD LOAD DEFLECTION DIAGRAM

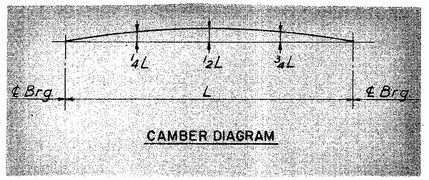
Note:
Intermediate stiffener spacing along stringers may be varied to clear utility supports.

DEFLECTION SCHEDULE					
STR.	¼L & ¾L	½L	STR.	¼L & ¾L	½L
S1, S6, S8	1½"	2⅛"	S2, S3, S9	1½"	2"
S11, S12			S10, S13		
S14			S4, S5, S7	1⅝"	2⅛"

NOTE TO CONTRACTOR:

The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.

In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.



CAMBER DIAGRAM

CAMBER SCHEDULE							
STR.	¼L	½L	¾L	STR.	¼L	½L	¾L
S1-S3	2"	2 3/4"	2"	S4, S5	2"	2 7/8"	2"
S6				S7			
S8-S14							

NOTE TO FABRICATOR:

The above stringers shall be fabricated with an upward camber amounting to the tabulated value.

This will provide approximate compensation for deflection under full dead load and for conformity with finished grade.

Dimensions are in inches.

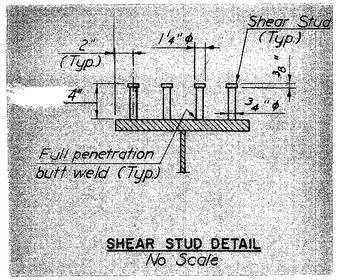
DETAIL "A"
No Scale



SHEAR STUD DETAIL
No Scale

SHEAR STUD NOTE:

Capacity = 3,400 lbs. per stud.

The contractor may, if he elects, use three ¾" diameter studs at the same longitudinal spacing in lieu of the four ¾" diameter studs shown.

Stud rows shall be placed parallel to the main deck reinforcing.

Shear stud spacing shown is maximum spacing.

NOTE TO CONTRACTOR:

The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.

In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.

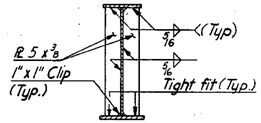
4-6"ϕ
VEPCO DUCT SUPPORT

NOTE "A"
Dimension shown is measured from top of web to top of slab at the intersection of the centerline of stringer and the centerline of bearing. At exterior stringers this is measured to the cross slope extended. This dimension may be varied between bearings as required to care for variation in camber, except that no portion of the stringer flange may fall within the 3" slab.

NOTES:
For spacing and location of utility supports and diaphragms, see Framing Plan sheet.

For Basic Attachment Details for cement asbestos conduit, see Standard Conduit Installation Details sheet.

For details showing gas and water mains thru abutments, see Standard Utility Support Details At Bridge Abutments sheet.



Note: Stiffener shall be welded to compression flange and have a tight fit to the tension flange.

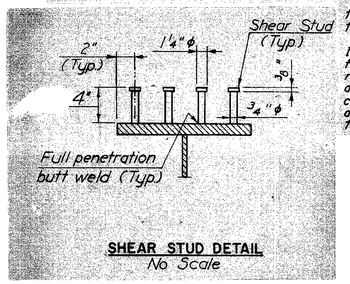
DETAIL "A"
No Scale

DEFLECTION SCHEDULE		
STR.	¼L & ¾L	½L
S1 – S7	1/4"	1 3/4"
S8, S11, S12	1⅜"	2"
S9, S10, S13, S14	1⅜"	1⅛"

NOTE TO CONTRACTOR:
The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.
In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.



SHEAR STUD DETAIL
No Scale

SHEAR STUD NOTE:
Capacity = 3,400 lbs. per stud.
The contractor may, if he elects, use three ¾" diameter studs at the same longitudinal spacing in lieu of the four ¾" diameter studs shown.
Stud rows shall be placed parallel to the main deck reinforcing.
Shear stud spacing shown is maximum spacing.

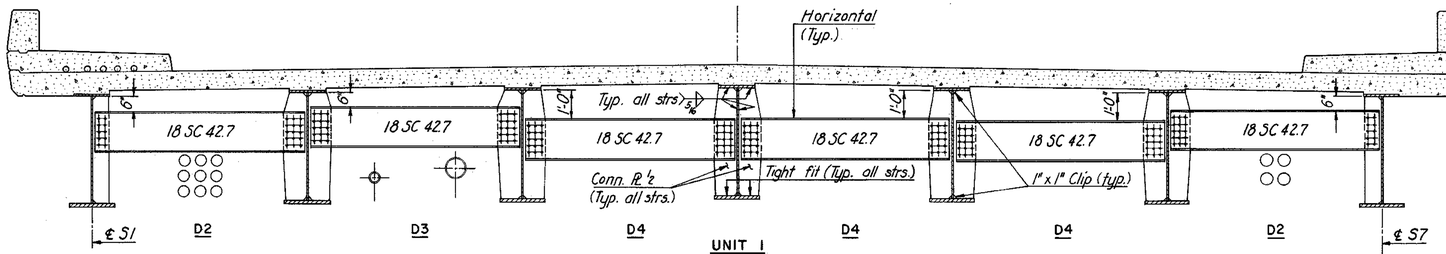
(SHOWING END DIAPHRAGMS)
Scale: 3/8" = 1'-0"

NOTE "A"
Dimension shown is measured from top of web to top of slab at the intersection of the centerline of stringer and the centerline of bearing. At exterior stringers this is measured to the cross slope extended. This dimension may be varied between bearings as required to care for variation in camber, except that no portion of the stringer flange may fall within the 8" slab.

NOTES:
For spacing and location of utility supports and diaphragms, see Framing Plan sheet.

For Basic Attachment Details for cement asbestos conduit, see Standard Conduit Installation Details sheet.

For details showing gas and water mains thru abutments, see Standard Utility Support Details At Bridge Abutments sheet.



UNIT 1
CROSS SECTION
(SHOWING INTERMEDIATE DIAPHRAGMS)

GENERAL NOTES

ROADWAY CAPACITY: One 42'-0" clear roadway. Two 5'0" sidewalks. Dead Load-Includes 15 lbs. per sq.ft. for future wearing surface. Live Loads-HS20-44 loading and B.P.R. modified for military vehicles.

SPECIFICATIONS: GENERAL-Virginia Department of Highway Road and Bridge Specifications, 1970. DESIGN-A.A.S.H.O. Standard Specifications for Highway Bridges, 1961, modified by Special Design Provisions. WELDING-1969 Standard Specifications for Welded Highway and Railway Bridges of the American Welding Society.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: CITY OF RICHMOND

TEMPERATURE: The normal temperature referred to on the plan is 60°F. The temperature range for movement is 0°F to 120°F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Foundation material shall be kept dry and special attention is called to Section 401.05 of the General Specifications and to the Contract Special Provisions concerning preparation of foundations for footings.

CONCRETE NOTES: Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a 3/4" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete, and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete (when gradient is over 2%).

Finishing Concrete Surfaces: See the Standard Architectural Details sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall conform to ASTM A615 Grade 40. All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted. All field connections shall be made with high strength bolts. High strength bolts shall be 7/8" diameter unless otherwise noted and shall conform to A.S.T.M. Specifications A325.

BENCH MARKS: See Reference Ties and Field Control Data sheet in highway plans.

For anchor bolt details and treatment of pads, see Standard Shoe Details sheet.

For details of architectural treatment of piers, see Standard Architectural Details sheet.

FOUNDATION NOTE:

Foundation elevation is approximate and may be varied to suit field conditions as directed by the Engineer. Vertical column reinforcing shall not be cut until this elevation is established.

Where elevation changes by more than two feet, redesign will be required.

Pier foundation is designed for an allowable bearing pressure of 3 tons per square foot.

GENERAL NOTES

ROADWAY CAPACITY: One 42'-0" clear roadway. Two 5'0" sidewalks. Dead Load-Includes 15 lbs. per sq.ft. for future wearing surface. Live Loads-HS20-44 loading and B.P.R. modified for military vehicles.

SPECIFICATIONS: GENERAL-Virginia Department of Highway Road and Bridge Specifications, 1970. DESIGN-A.A.S.H.O. Standard Specifications for Highway Bridges, 1961, modified by Special Design Provisions. WELDING-1969 Standard Specifications for Welded Highway and Railway Bridges of the American Welding Society.

CONTRACT SPECIAL PROVISIONS

Specifications and Contract Special Provisions referred to above are necessary to make these plans complete.

DATUM: CITY OF RICHMOND

TEMPERATURE: The normal temperature referred to on the plan is 60°F. The temperature range for movement is 0°F to 120°F.

DIMENSIONS: All dimensions are measured horizontally and vertically unless otherwise noted.

EXCAVATION: Excavation below subgrade and cut slope template shall be classified as Structure Excavation. All excavation above these limits shall be classified as Regular Excavation and is not included in the Structural Quantities.

FOUNDATIONS: Footings shall rest on firm material. Foundation material shall be kept dry and special attention is called to Section 401.05 of the General Specifications and to the Contract Special Provisions concerning preparation of foundations for footings.

CONCRETE NOTES: Concrete in superstructure shall be Class A4. All other concrete shall be Class A3. All exposed edges and corners shall have a 3/4" chamfer or fillet unless otherwise noted. Care in the method of vibration, the use of low-slump concrete, and/or other means shall be employed to prevent downgrade movement of newly placed slab concrete (when gradient is over 2%).

Finishing Concrete Surfaces: See the Standard Architectural Details sheets and the Contract Special Provisions for types and details.

All reinforcing steel shall conform to ASTM A615 Grade 40 All reinforcing bar dimensions on the detailed drawings are to centers of bars unless otherwise noted. Clear distance between reinforcing steel and face of concrete shall be as noted on the plans. All bar laps shall be 30 diameters of the smaller diameter bar unless otherwise noted.

STEEL NOTES: Structural steel shall conform to A.S.T.M. Specification A36 except as noted. All field connections shall be made with high strength bolts. High strength bolts shall be 7/8" diameter unless otherwise noted and shall conform to A.S.T.M. Specifications A325.

BENCH MARKS: See Reference Ties and Field Control Data sheet in highway plans.

NOTES:

For anchor bolt details and treatment of pads, see Standard Shoe Details sheet.

For details of architectural treatment of piers, see Standard Architectural Details sheet.

FOUNDATION NOTE:

Foundation elevation is approximate and may be varied to suit field conditions as directed by the Engineer. Vertical column reinforcing shall not be cut until this elevation is established.

Where elevation changes by more than two feet, redesign will be required.

Pier foundation is designed for an allowable bearing pressure of 3 tons per square foot.

		F12	5
		F12N	2

NOTE TO FABRICATOR:
The above stringers shall be fabricated with an upward camber amounting to the tabulated value.
This will provide approximate compensation for deflection under full dead load and for conformity with finished grade.
Dimensions are in inches.

NOTE TO CONTRACTOR:
The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.
In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.

TABLE A	
STRINGER	DIM "A"
S1, S2	9⅛"
S3-S7	9¼"
S8-S15	9½"

NOTE "A":
Dimension shown is measured from top of stringer to top of slab at the intersection of the centerline of stringer and the centerline of bearing. At exterior stringers this is measured to the cross slope extended. This dimension may be varied between bearings as required to care for variation in camber, except that no portion of the stringer flange may fall within the 8" slab.

REINFORCING DETAILS FOR BEARING PADS AT S3 — S5 AND S10 — S12
Scale: 1"=1'-0"

NOTES:

For anchor bolt details and treatment of pads, see Standard Shoe Details sheet.

For details of architectural treatment of piers, see Standard Architectural Details sheet.

FOUNDATION NOTE:

Foundation elevation is approximate and may be varied to suit field conditions as directed by the Engineer. Vertical column reinforcing shall not be cut until this elevation is established.

Where elevation changes by more than two feet, redesign will be required.

Pier foundation is designed for an allowable bearing pressure of 3 tons per square foot.

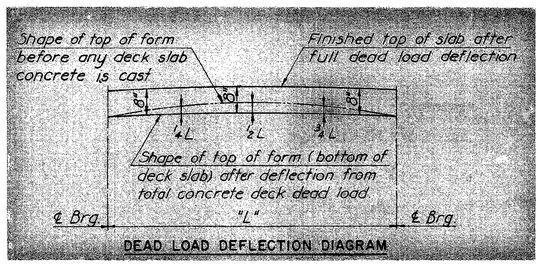
CAMBER DIAGRAM

CAMBER SCHEDULE			
STR.	¼L	½L	¾L
S2 S4-S6	3 3/8"	4 5/8"	3 3/8"
S1, S3 S7	3½"	4 5/8"	3½"
S8-S14	¼"	¼"	¼"

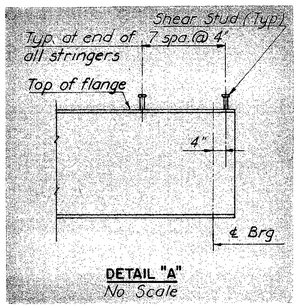
NOTE TO FABRICATOR:
The above stringers shall be fabricated with an upward camber amounting to the tabulated value.
This will provide approximate compensation for deflection under full dead load and for conformity with finished grade.
Dimensions are in inches.



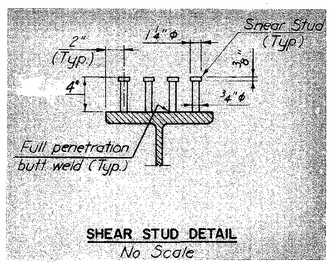
DEAD LOAD DEFLECTION DIAGRAM

DEFLECTION SCHEDULE		
STR.	¼L & ¾L	½L
S1, S3, S5-S7	¾"	1⅛"
S2, S4	¾"	1"
S8-S14	⅜"	½"

NOTE TO CONTRACTOR:
The above deflections are those anticipated to occur in the stringer upon placement of the total concrete deck dead load.
In practice, the stringers in place are not likely to have the exact camber to compensate for these deflections during construction. The residual amounts shall be provided for by adjusting forms to vary the thickness of the concrete bolster between the bottom of the slab and the top of stringer, without alteration of the slab thickness.



DETAIL "A"
No Scale



SHEAR STUD DETAIL
No Scale

SHEAR STUD NOTE:
Capacity = 3,400 lbs. per stud.
The contractor may, if he elects, use three ¾" diameter studs at the same longitudinal spacing in lieu of the four ¾" diameter studs shown.
Stud rows shall be placed parallel to the main deck reinforcing.
Shear stud spacing shown is maximum spacing.

NOTE "A"
Dimension shown is measured from top of stringer to top of slab at the intersection of the centerline of stringer and the centerline of bearing. At exterior stringers this is measured to the cross slope extended. This dimension may be varied between bearings as required to care for variation in camber, except that no portion of the stringer flange may fall within the 8" slab.

NOTES:
For spacing and location of utility supports and diaphragms, see Framing Plan sheet.

For Basic Attachment Details for cement asbestos conduit, see Standard Conduit Installation Details sheet.

For details showing gas and water mains thru abutments, see Standard Utility Support Details At Bridge Abutments sheet.
